

UMAR ALI

Karachi, Pakistan | umarali40451@gmail.com | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Results-driven **Full-Stack MERN Developer** with 2+ years of professional experience architecting and deploying full-stack web applications. Specialized in building scalable microservices, secure authentication systems, responsive user interfaces, and REST APIs. Proven expertise in leading end-to-end development cycles from requirements gathering to production deployment. Strong focus on clean code architecture, performance optimization, and cross-functional collaboration.

TECHNICAL SKILLS

Frontend Development: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, React Native, Tailwind CSS, Redux, Context API, Material-UI

Backend Development: Node.js, Express.js, REST APIs, WebSocket Integration, JWT Authentication, Role-Based Access Control (RBAC), MVC Architecture

Database & ORM: MongoDB, Mongoose, Database Schema Design, Query Optimization

Tools & DevOps: Git, GitHub, RESTful API Integration, Responsive Design, Debugging, Clean Code Architecture, Docker (basics), Vercel, Netlify

Testing & Quality: Unit Testing, API Testing, Browser DevTools, Performance Debugging

Web3/Blockchain: Wagmi Integration, Wallet Connection, Smart Contract Interaction, Crypto Transaction Handling

PROFESSIONAL EXPERIENCE

Full-Stack MERN Developer

Code Rivals, Karachi, Pakistan | February 2024 – February 2026

- Architected and deployed 5+ full-stack web applications using the MERN stack, serving 500+ monthly active users with 99.2% uptime
- Engineered secure JWT-based authentication and role-based access control (RBAC) systems, reducing unauthorized access attempts by 100%
- Designed and built responsive dashboards using React.js and Tailwind CSS, improving user engagement by 45% and reducing page load time from 3.5s to 1.2s
- Developed 30+ RESTful API endpoints with Node.js and Express.js, optimizing database queries to reduce response time by 35%
- Integrated third-party APIs (payment gateways, cloud storage, mapping services) ensuring seamless functionality across 8+ platform features
- Implemented Mongoose schema design and MongoDB aggregation pipelines for complex data operations, reducing API calls by 40%
- Collaborated with cross-functional teams (designers, product managers, QA) in Agile sprints, delivering features on-time with 98% acceptance rate

KEY PROJECTS

Syssel – Service Marketplace Platform

Tech Stack: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, JWT Authentication

- Architected end-to-end marketplace platform enabling service discovery, real-time bookings, and provider workflows for 200+ active service providers
- Developed responsive UI components with React.js and Tailwind CSS, achieving 95+ Lighthouse performance score across all pages

- Engineered backend services for service listings, booking management, and payment processing using Node.js and Express.js REST APIs
- Implemented role-based dashboards for customers, service providers, and admins with distinct feature access using JWT RBAC
- Optimized database queries using MongoDB aggregation pipelines, reducing API response time by 45% on high-traffic endpoints
- Integrated Stripe payment gateway for secure transaction handling with 99.9% transaction success rate

TaskBound – Web3 Bounty and Rewards Platform

Tech Stack: React.js, Node.js, Express.js, MongoDB, Wagmi, Tailwind CSS, Blockchain Integration

- Designed and implemented Web3-enabled full-stack platform allowing users to complete campaigns and earn cryptocurrency rewards
- Engineered wallet connection integration using Wagmi, supporting MetaMask and WalletConnect with support for 4+ blockchain networks
- Built task management system with campaign handling, reward logic, and completion verification, processing 1000+ tasks monthly
- Developed secure smart contract interaction layer in frontend for reward distribution and transaction handling
- Implemented MVC backend architecture with modular services, improving code reusability by 50% and reducing development time on new features by 30%
- Created admin dashboard for campaign management and analytics, providing real-time insights on user engagement and reward distribution
- Optimized frontend bundle size by 35% through code-splitting and lazy loading, improving initial load time to under 2 seconds

TKO (To Know One Self) – Telehealth & Diagnostics Platform

Tech Stack: React.js, GraphQL, AWS (Cloud Database & Hosting), JWT Authentication, Tailwind CSS | Live: app.toknowoneself.co

- Built a full-stack telehealth platform enabling patients to book doctor consultations, order lab/blood work, and manage prescription orders through a single integrated workflow
- Developed an end-to-end appointment and consultation system connecting patients with doctors, including scheduling, consultation records, and follow-up flows
- Engineered a lab-ordering module allowing users to request and track blood work and diagnostic tests, with status updates from order to result delivery
- Implemented a prescription management system enabling doctors to issue prescriptions and patients to order medications digitally
- Designed secure, role-based access for patients, doctors, and administrators using JWT authentication and RBAC, ensuring sensitive medical data stayed protected
- Created responsive, accessible UI with React.js and Tailwind CSS, delivering a smooth experience across desktop and mobile devices
- Built GraphQL APIs with a cloud database hosted on AWS to handle consultations, lab orders, and user data with a scalable, maintainable architecture

EDUCATION & CERTIFICATIONS

KIET (Karachi Institute of Engineering and Technology), Karachi

Bachelor of Science in Computer Science (BSCS) | Expected Graduation: 2029

- React.js Advanced Concepts (Udemy)
- Node.js Complete Developer Course (Udemy)

ADDITIONAL INFORMATION

- Languages: Urdu (Native), English (Fluent)
- Open Source Contributions: Active contributor to React and Node.js community projects
- Portfolio: [umar-portfolio-wine.vercel.app](#) | GitHub: [github.com/umar942](#)
- GitHub Contributions: 450+ commits in 2024–2025

KEY ACHIEVEMENTS

- Delivered 5+ production-grade applications with 99%+ uptime
- Reduced API response time by 35–45% through optimization
- Built scalable systems handling 500+ monthly active users
- Implemented Web3 integration with multi-blockchain support
- Improved user engagement by 45% through UI/UX improvements
